Using AI Responsibly in Quantitative Social Research

Rongxin Ouyang*

* PhD Candidate, Computational Communication, National University of Singapore
Interest: Using causal and computational methods to evaluate societal and political impacts of digital information technologies [1]Affiliation, City

November 5, 2026

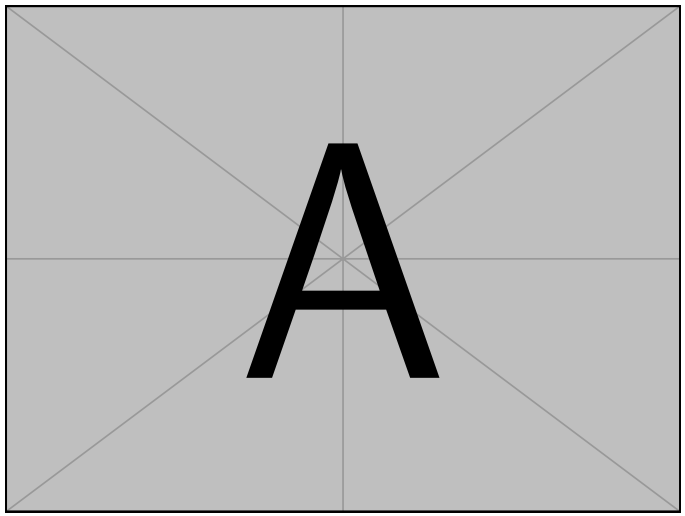

Introduction

Introduction: Motivation

- A first point with a gray citation (king2013how)
- A second point, with a **highlighted** phrase
  - A sub-point (roberts2018censored)
  - A Chinese-language source (weibo2026hotlist)

Introduction: Text and Figure

- Prior work finds X (**king2013how**)
- Previously shown point, greyed out for progressive reveal

king2013how<empty citation>

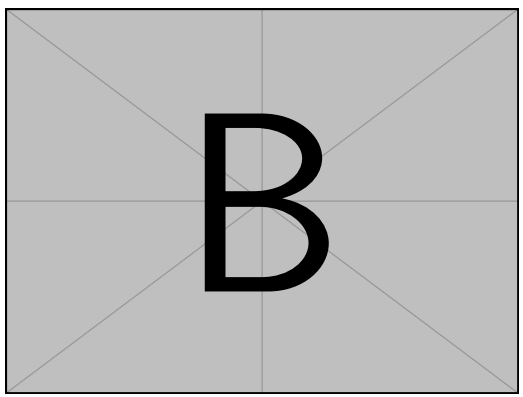

Introduction: Our Approach

- We study ...
- We measure ...
- We identify ...
- We validate ...

Literature

Literature 1. Topic

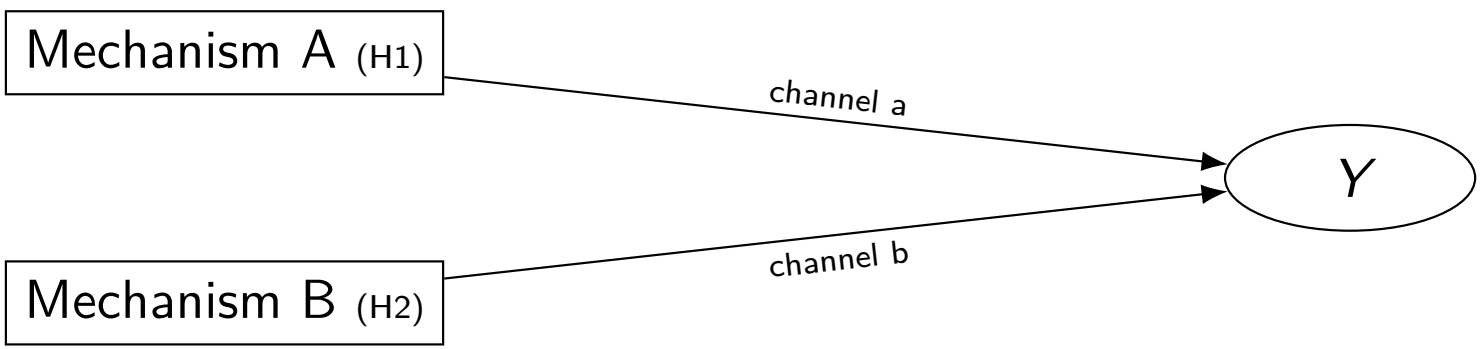

1. **Stage one.** Description (king2013how)
2. **Stage two.** Description (roberts2018censored)

roberts2018censored<empty citation>

Literature 1. Hypotheses

- **H1. Name.** Statement of the hypothesis
- **H2. Name.** Statement of the hypothesis

Data

Data: Sources

1. **Dataset A**: description (coverage, frequency)
   - N observations; key variables
2. **Dataset B**: description

Methods

Methods 1: Model

- Unit of analysis: **unit**
- Estimator (king2013how)
  - x_i: key regressor
  - z_{it}: controls

$$y_{it} = \alpha + \beta_1 x_i + \beta_2 z_{it} + \varepsilon_{it} \tag{1}$$

Results

Results: Overview

1. **Finding 1**: ...
2. **Finding 2**: ...
3. **Finding 3**: ...

Result 1: Main Estimates

	M1	M2	M3
x_i	0.040^{***}	0.038^{***}	0.034^{***}
	(0.003)	(0.003)	(0.003)
Controls	No	Yes	Yes

Note. $^{*}p < .05$, $^{**}p < .01$, $^{***}p < .001$.

Result 1: Interpretation

- Coefficient is positive $(.034, p < .001)$, about **3.5% per SD**
- Second takeaway

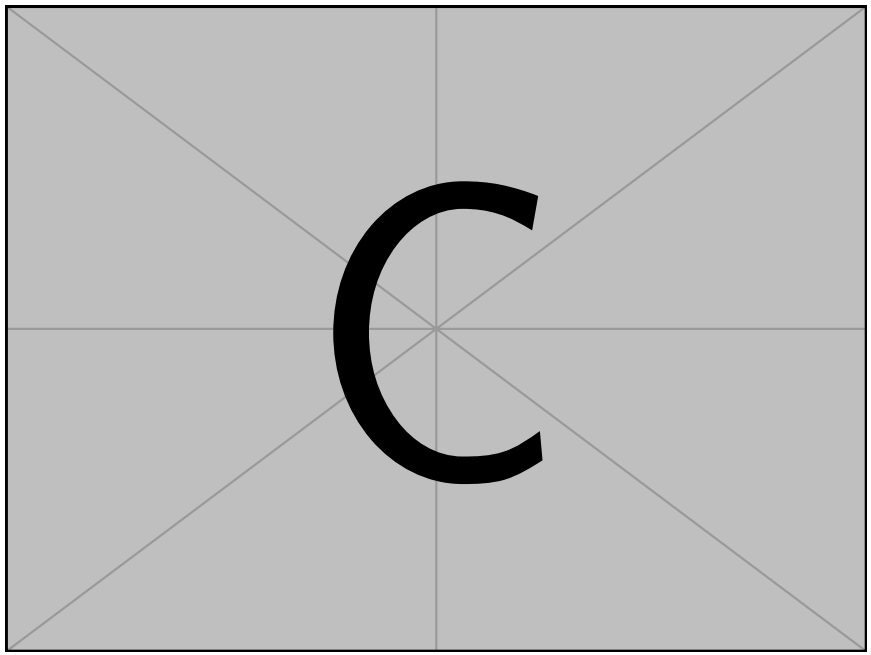

Figure note in gray.

Discussion

Discussion

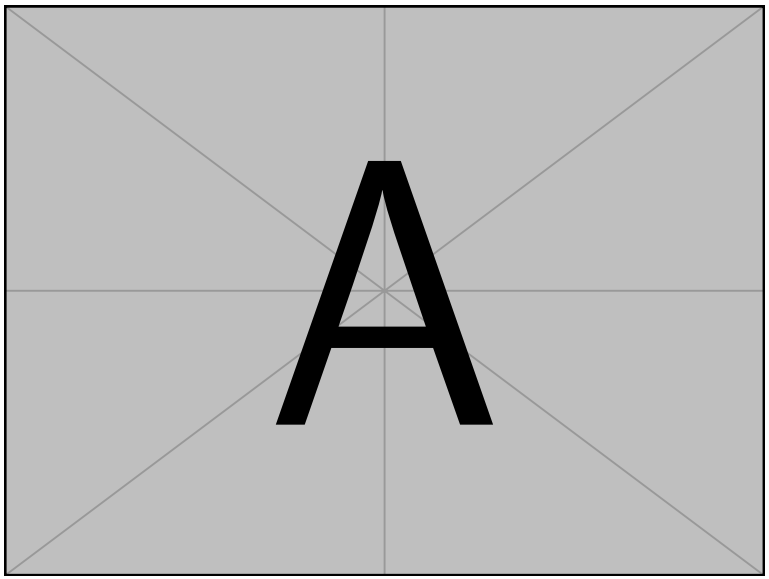

- Implication 1
- Implication 2

Limitations

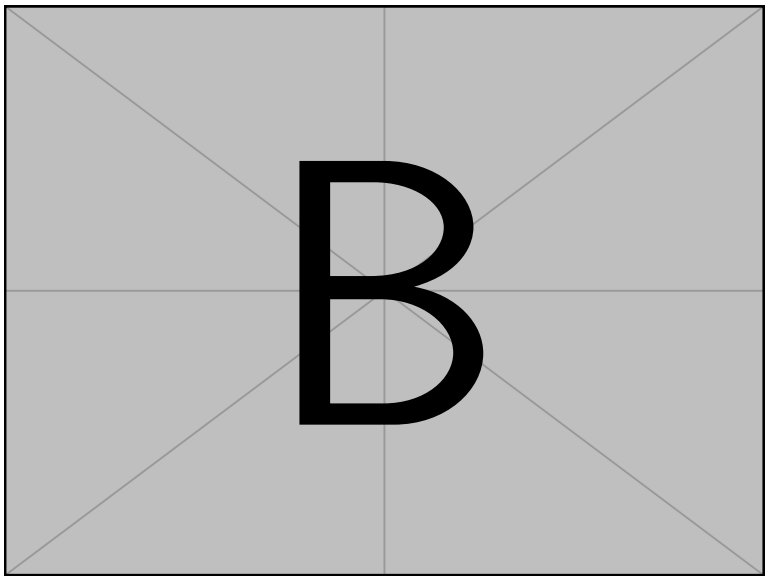

1. **Measurement.** ...
2. **Identification.** ...
3. **Generalizability.** ...

Supplementary Information

SI: Two Sub-Figures
